ABOUT

QA Engineer with 3+ years of experience in testing. Have worked on both large-scale and small products: from a voice assistant with millions of users to websites, mobile apps, and indie games.

Key strengths:

- Can quickly get to the heart of a product, even without a clear specification.
 - Goal-oriented and persistent — I get things done despite challenges.
 - Good at finding common ground even with the most reserved teammates.
-

WORK EXPERIENCE

Yandex | QA Engineer

January 2022 – Present (4 years 5 months) · Remote

Voice assistant "Alice" — a large-scale product with a multi-million user base. My primary responsibility was testing Alice to improve the assistant's accuracy and usability.

Responsibilities:

- Functional testing
- Scenario and personality behaviour testing
- Documentation review for compliance with requirements
- Data verification for model training
- Quality control of assistant behaviour
- Identifying errors and inconsistencies
- Writing bug reports and improvement recommendations in Yandex.Tracker
- Providing feedback on voice assistant improvements

Prepared detailed testing documentation for Alice's scenarios, which reduced the number of typical mistakes made by colleagues.

Stack: Yandex.Tracker

Tracking Travel | QA Engineer

February 2025 – August 2025 (7 months)

Tracking Travel is a ski sport service: a website with ski resort maps and trail routes, as well as a mobile app. The project goal was to prepare the site and app for first launch — building test documentation and catching bugs before release.

Team: QA team lead, 3 developers, 3 QA engineers.

Responsibilities:

- Functional testing (logic, filters, search)
- Documentation testing
- Design (Figma) and layout testing
- Writing checklists in Miro
- Writing test cases in Test IT
- Logging bugs in the task tracker
- Providing usability and visual improvement recommendations for the website
- API testing via Postman and Swagger
- Working with DevTools
- Integration testing
- Working with the database via Metabase
- Mobile app testing via debug build and Charles sniffer
- Working with logs in Sentry
- Participating in daily stand-ups, planning sessions, and brainstorms
- Working with tasks in Jira

Created a detailed Miro checklist that the team later used as the basis for regression testing — speeding up repeat checks and reducing missed bugs.

Stack: Postman, Swagger, DevTools, Miro, Figma, Test IT, Sentry, Charles, Metabase, Jira

TourClick | QA Engineer

October 2024 – February 2025 (5 months)

TourClick is a platform for tour operators that enables them to create and manage tours within a single system. The task was to verify the app's functionality on iOS and Android, as well as the UI/UX, to improve stability and usability before launch.

Team: QA team lead, 2 developers, 3 QA engineers.

Responsibilities:

- Functional testing
- Writing test documentation in Miro
- Manual testing of the client side: iOS, Android
- Verifying design and layout compliance
- Collaborating with developers
- Filing bug reports in Yandex.Tracker and tracking their resolution
- Participating in daily stand-ups, planning sessions, and brainstorms
- Compiling daily testing result reports

Found 101 bugs, including 9 critical ones. Made 23 UI recommendations, improving the overall user experience.

Stack: Yandex.Tracker, Miro, TestFlight

SKILLS & TOOLS

- Functional testing, regression testing, integration testing, UAT
- API testing: Postman, Swagger
- Mobile testing: iOS, Android, Charles, TestFlight
- Bug tracking & task management: Jira, Yandex.Tracker
- Test documentation: Test IT, Miro, Figma
- Monitoring & logs: Sentry, DevTools

- Database: SQL, Metabase
 - Version control: Git / GitHub
-

EDUCATION

Togliatti State University | *Bachelor's — Software Development and Testing*

September 2024 – May 2029 · Remote

ADDITIONAL

- Co-author of a QA-focused Telegram channel: <https://t.me/FreakDailyk>
- Interested in Korean culture and K-pop. Kamsahamnida!
